

Trauma and Its Impact on Learning

Childhood Trauma & Brain Development

[This resource](#) provides a wide array of information that outlines trauma's effect on the developing brain of a child, including the parts of the brain that change due to trauma and how traumatic stress causes negative impacts.

Trauma and Learning

[This video](#) provides information about childhood trauma and its effect on a child's ability to learn. This resource features the specific aspects of learning that are effected by trauma, including language development, communication, completion of classroom tasks, and the ability to follow instructions correctly.

Helping a Traumatized Child in the Classroom

[This resource](#) provides detailed information on child traumatic behaviors related to learning in the classroom. This resource also features steps educators can take to support traumatized children in their classroom, by identifying trauma influenced behaviors and employing specific strategies to help.

These resources are part of curriculum created by CHDI, in partnership with the State Department of Education and Department of Children and Families for the SAMHSA-funded Project AWARE Initiative. Learn more at www.chdi.org or contact Jamie LoCurto: locurto@uchc.edu.
